Loyiha bosh muhandisi:  A.Yuldashev.

Toshkent viloyati filyali Bekobod tumani "Zafar" shaxarchasi hududida joylashgan "Respublika Tez tibbiy yordam markazi stansiyasini" binolarini mukammal tamirlash uchun loyihasi binosini mukammal ta'mirlash ishlarini buyurtmachi Toshkent viloyati Yagina buyurtmachi tomonidan berilgan loyiha topshirig'iga asosan ishlab chiqildi.

Nº1 – binosi 18,0×9,6m o'lchamgagi bir qavatli bo'lib, qavat balandligi h=3,30mni tashkil etadi.

Buyrtmachining talablari xamda Texnik sinov №\_\_\_\_\_ asosida qavatlar loyihaviy rejalarida o'zgartishlar kiritildi.

Ichki pardoqlashda hamma xonalarni texnologik jarayonlarga qarab, yoʻlak marmar va avvalgi qozonxona pol qismi osti shagʻal bilan toʻldirilib pol laminant xolga keltirildi taʼmirlashliklardan foydalanilgan.

Devorlar cho'qilab, pardoz ishlari jadvalda ko'rsatilgan holda pardozlash ishlari olib boriladi.

Tashqi pardoz ishlariga zamonaviy materiallar ishlatiladi, devorlariga issiqlik himoyasi "Bazalt" bilan qoplanib so'ngi rusumdagi fasad bo'yoqlari ishlatiladi, sokol qismiga ham keramogranit qoplanadi.

Eshik va romlar alyumin, PVH va MDF materiallaridan tayyorlanadi.

Bino qurilish me'or va talablariga, yong'in xavsizligi ishlab chiqilgan.

Ishlab-chiqilgan loyixa ShNQ 2.08.02-09\* "Jamoat binolari va inshootlari"ga muvofiq ishlab chiqildi.

Architectural drawing of a house facade. The drawing shows a gabled roof with a triangular window in the gable. The main facade has two windows and a central entrance with a staircase. Labels include "Leksan. q.AQ-" pointing to the roofline, "Keramogranit" pointing to the ground level, and section markers "B" and "A" at the bottom corners.

in

Keramogranit

A B

Architectural cross-section drawing of a building, labeled "Qirgim A-A." at the top center. The drawing shows the internal structure, including the roof, truss system, and floor. Key features include:

- Elevations:**
  - +5,50 (Roof peak)
  - +3,75 (Roof slope)
  - +3,00 (Roof slope)
  - ±0,00 (Ground level)
  - 0,75 (Foundation level)
- Structural Elements:**
  - Roof: Labeled "- Profnastil" (Profiled sheet).
  - Truss: Labeled "- Temir ferma. (q.AQ- )".
  - Floor: Labeled "A" and "q.AQ-".
  - Foundation: Labeled "B" and "A".
- Dimensions:**
  - Overall width: 9600.

The drawing is a technical architectural drawing showing the internal structure of a building. It includes a cross-section of the roof, truss system, and floor. The drawing is labeled "Qirgim A-A." at the top center. The drawing shows the internal structure, including the roof, truss system, and floor. Key features include:

- Elevations:**
  - +5,50 (Roof peak)
  - +3,75 (Roof slope)
  - +3,00 (Roof slope)
  - ±0,00 (Ground level)
  - 0,75 (Foundation level)
- Structural Elements:**
  - Roof: Labeled "- Profnastil" (Profiled sheet).
  - Truss: Labeled "- Temir ferma. (q.AQ- )".
  - Floor: Labeled "A" and "q.AQ-".
  - Foundation: Labeled "B" and "A".
- Dimensions:**
  - Overall width: 9600.

4

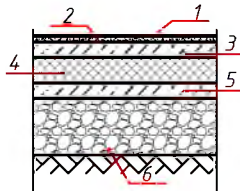

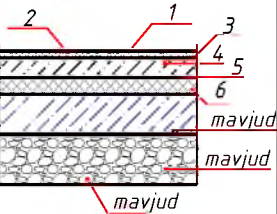

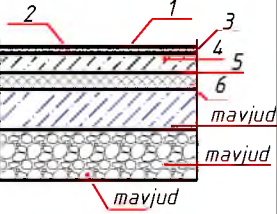

The diagram shows a horizontal beam of total length 9600 units, supported at points A and B. A rectangular hole is located in the upper portion of the beam. A distributed load, represented by red diagonal hatching, is applied to the top surface of the beam, extending from the left support to the right support, with the hole cut out of the center.

Technical drawing of a wall section showing a cross-section with three rectangular openings. The wall is 9600 units wide and 3500 units high. The openings are located at various heights and widths. The drawing includes dimension lines and labels for height (+3.50, ±0,00) and width (9600).

### 1. Изготовление.

- 1.1. Изготовление конструкций производить на заводе металлоконструкций по разработанному проекту КМД в соответствии с требованиями:
  - КМК 2.03.05-97 "Стальные конструкции",
  - КМК 3.03.02-98 "Правила производства и приемки работ. Металлические конструкции",
  - КМК 3.04.02-97 "Защита строительных конструкций и сооружений от коррозии",
  - ГОСТ 12.3.016-87 "Антикоррозионные работы при строительстве. Требования безопасности".
- 1.2. Все размеры фасонки для крепления элементов должны быть определены при разработке чертежей КМД в зависимости от действующих усилий.

### 1. Антикоррозионная защита.

- 1.1. Степень агрессивного воздействия окружающей среды к металлоконструкциям - неагрессивная; режим сухой.
- 1.2. Антикоррозионная защита металлоконструкций принята в соответствии с КМК 2.03.11-96 "Защита строительных конструкций от коррозии".
- 1.3. Все поверхности металлоконструкций должны быть огрунтованы на заводе - изготовителе одним слоем грунтовки ГФ 021 по ГОСТ 25129-2020 и окрашены в два слоя эмалью ПФ-115 по ГОСТ 6465-23 на монтажной площадке. Нанесение грунтовки непосредственно на строительной площадке допускается только при исправлении мест повреждения грунтовки в процессе транспортировки, хранения и монтажа по подготовленной поверхности.
- 1.4. Общая толщина лакокрасочного покрытия должна быть не менее 55 мкм.
- 1.5. Антикоррозионную защиту конструкций производить по предварительно очищенной, обеспыленной поверхности. Степень очистки стальных конструкций от жировых загрязнений и маркировочных надписей - первая по ГОСТ 9.402-80\* Т1. Степень очистки стальных конструкций от окислов (окалина, ржавчина, шлаковые включения) перед нанесением защитного покрытия - вторая по ГОСТ 9.402-80\*. Способ удаления окислов - пескоструйная или дробеструйная очистка по ГОСТ 9.402-80\*.
- 1.6. Поверхности стальных конструкций не должны иметь заусенцев, острых кромок радиусом менее 0,3мм, сварочных брызг, прожогов, остатков флюса.
- 1.7. Работы по защите от коррозии выполнять со строгим соблюдением требований:
  - КМК 3.04.02-97 "Защита строительных конструкций и сооружений от коррозии";
  - ГОСТ 12.3.005-75\* "Соблюдение техники безопасности при производстве окрасочных работ.
 Система стандартов безопасности труда. Работы окрасочные. Общие требования безопасности". ГОСТ 12.3.016-87\* "Антикоррозионные работы при строительстве. Требования безопасности".

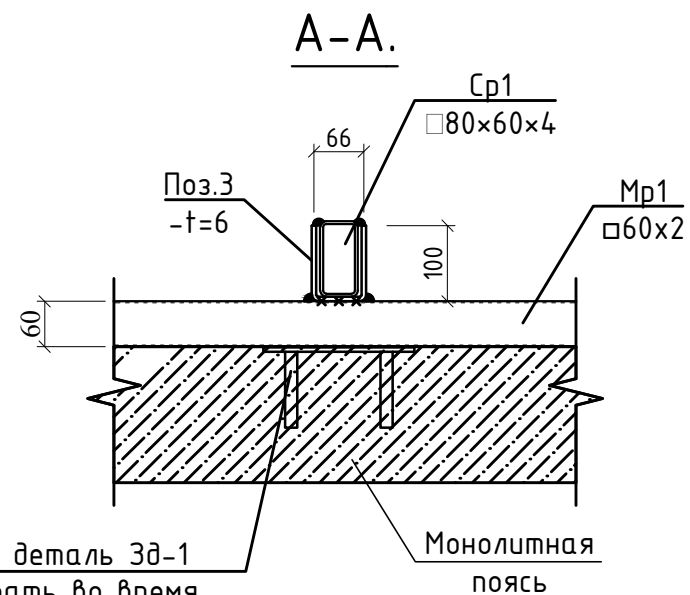

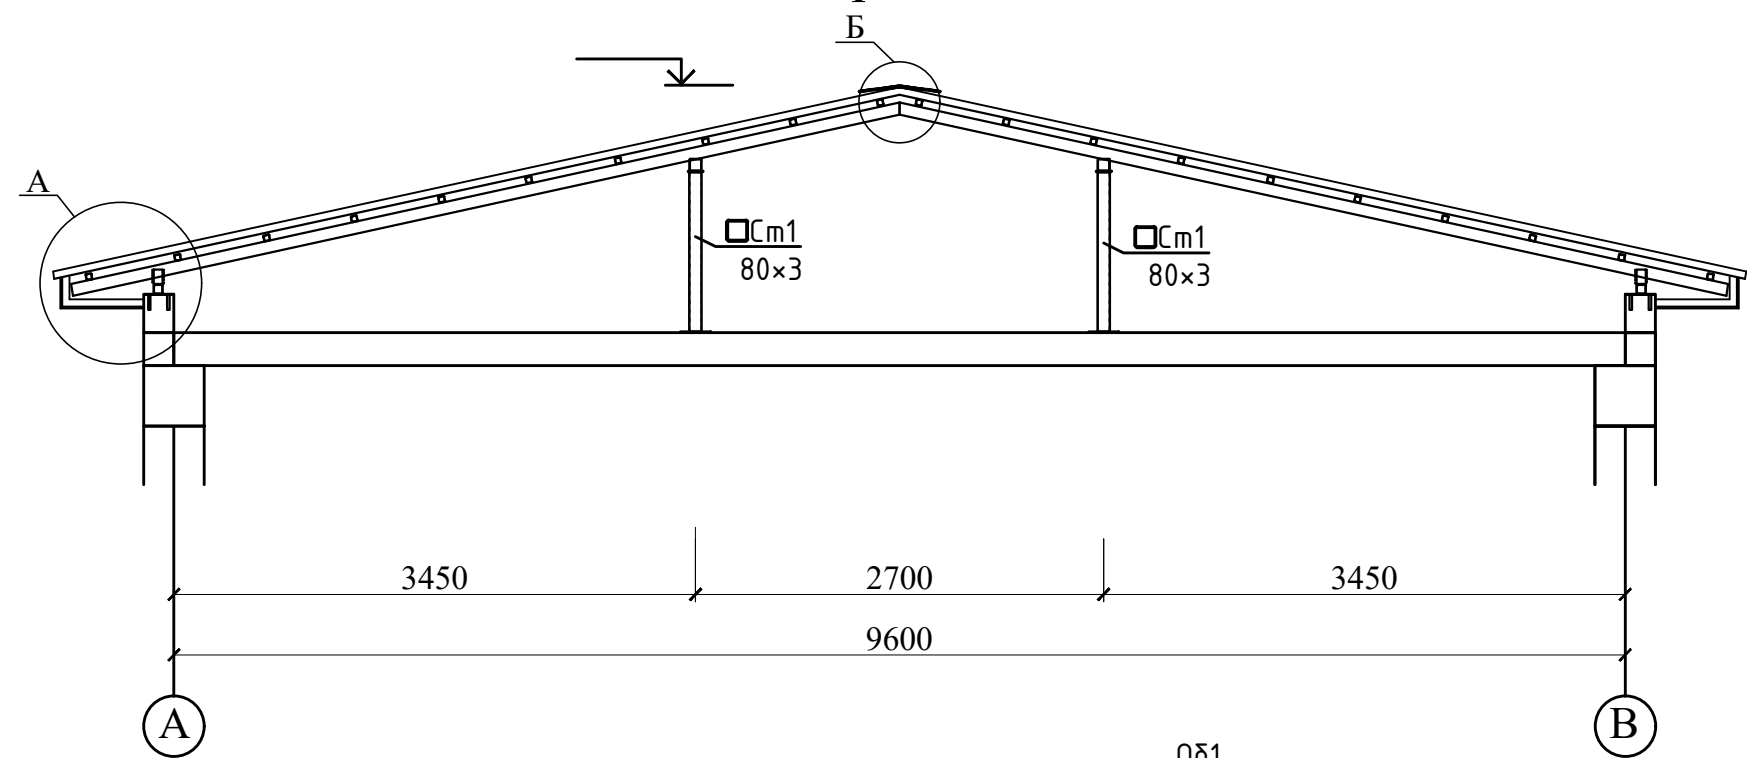

### 2. Соединение элементов.

- 2.1 Все соединения - сварные.
- 2.2 Все сварные швы выполнять полуавтоматической сваркой с применением материалов, соответствующих классу свариваемых сталей, обеспечивающих равнопрочное соединение встык с основным металлом. Ручную сварку и приварку элементов из стали марки С245, С255 производить электродами типа Э46А.
- 2.3 Разделку кромок и зазоры в сварных швах принимать по ГОСТ 8713-79\*, ГОСТ 14771-76\*, ГОСТ 11533-75\*, ГОСТ 11534-75\*.
- 2.4 Минимальные размеры сварных швов принимать по табл. 14.1; коэффициенты  $V_f$  и  $V_z$  по табл.13.1 КМК 2.03.05-97.
- 2.5 Заводские стыки должны быть равнопрочны основному металлу.

Eslatmalar.

- To'rtburchak kesim yuzali metall trubalar bir-birlari bilan payvandlab mahkamlanadi.
- Zakladnoy detal quyma serdechniklar yoki g'isht terimlari orasiga mustahkam qilib o'rnatiladi.
- Leksan metall progonlarga bolt-gaykalar bilan mahkamlanadi. Leksan qalinligi 10 mm.
- Metall konstruksiyalar metallga ishlov beruvchi tozalagichlar bilan yaxshilab tozalanadi.
- Metall konstruksiyalar moyli bo'yoq bilan ikki marta yaxshilab bo'yoq qilinadi.
